**Sub: Request to share with us information and research details about adverse effect on human being due to higher level consumption of iodine**

Dear Sir,

We appreciate the role of ICCIDD, India to reach the last mile of universal salt iodization and instrumental in ensuring greater coordination and synergy amongst stakeholders in India resulting the current 78% household level coverage of adequate iodised salt.

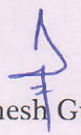

We had protested the fixation and imposition of 20 – 30 PPM of iodine in salt by FSSAI and in turn the same has been kept in abeyance and universal iodization has reached up to 80%. You are involved in research for attaining sustainable elimination of Iodine Deficiency Disorders (IDD) and iodine programme for last 30 years. Hence, you must have ready information and relevant research reports about effect of various level of iodine on human consumption.

In view of the above, we shall appreciate if you would please share with us information and research report about adverse effect on human being due to higher level consumption of iodine.

Hope to receive immediate response.

Thanking you.

Yours faithfully

  
Dinesh Gupta  
President
