Sub: Iron content incorporation for Iron Fortified Iodised Salt in the Act

Dear Sir,

We would like draw your attention towards non-incorporation of specified Iron content for Iron Fortified Iodised Salt (double fortified salt).

Iron Fortified Iodised Salt is a crushed crystalline solid, white or pale or pink or light gray in colour, free from contamination with clay and other extraneous adulterants and impurities. During the process of blending ferrous fumarate in encapsulated form / by any other technology is used for fortification resulting in visible iron particles which may result in rejection of final product. Hence, it is essential to specify and to incorporate Iron content in the said Act.

Hope to receive due attention on our suggestion and looking forward for necessary updation in the act.

Thanking you.

Yours faithfully,

Mahadev Rajani
Vice President
